

Fresh Fill for Chlorinated Pools

To start using one of the BioGuard 3 - Step Programs, follow these initial instructions:

1.

Perform a complete water analysis and follow ALEX recommendations for balancing. This includes establishing a 40 ppm CYA level for outdoor pools.

2.

With the pump running, add 1 bag of [Burn Out Extreme](#) per 50,000 litres or 1 bag of [Burn Out 35](#) per 35,000 litres to establish a free chlorine residual of 1.5 - 3.0 ppm.

3.

Fill your automatic feeder, skimmer or floater with [Smart Sticks](#) , [Pacific Blue Power Tabs](#) or [Stingy Sticks](#)

4.

Add 50 mL of [Back-Up II Algae Inhibitor](#) per 10,000 litres.

5.

Circulate 24 hours, then retest the free chlorine residual and the pH. Adjust pH to 7.4 - 7.6 and make sure free available chlorine is 1.5 - 3.0 ppm.

6.

The following week, begin the [5-Minute Work Week Pool Care Program](#) or the [3 -Step Pool Care Program](#)
