

Rapid Chlorine Demand Test Station Instructions

BioGuard proudly introduces a new, proprietary test station that provides a quick, accurate way to test swimming pools for Chlorine Demand. The new BioGuard Rapid Chlorine Demand Test Station provides results in just 10 minutes and recommends super chlorination treatments to satisfy a chlorine demand. The customised design of the station allows for easy testing and tracking capabilities for up to three water samples at one time using only 20 mL of water per test. Automatic dosing of the reagent ensures consistent dosing and results.

Benefits:

-

Results in 10 minutes, not 24 hours.

-

Easy organization and tracking capabilities.

-

Timer accurately tracks tests.

-

Ability to perform multiple tests simultaneously.

-

Easy to read and interpret results.

-

Timers are easily re-set and water resistant.

-

Homeowner leaves the store same day with the recommended products.

Features:

-

3 sample slots on station platform.

-

Automatic dosing of reagent for consistency.

-

Individual sample timers for tracking.

-

Alarm reminder when reaction is complete.

-

Test kit contains enough strips for 50 tests.

-

Test kit contains enough reagent for 100 tests.

-

Colour comparison chart for quick diagnosis.

-

White board to capture information on individual samples.

-

Easily referenced conversion chart for calcium and lithium super chlorination recommendations.
